PROJECT ANNOUNCEMENT

FinIntell AI — Financial Intelligence Platform

An enterprise-grade SaaS application automating receipt parsing, expense analytics, and conversational financial assistance.

GitHub Repository

`https://github.com/SHUBHAM-MAKODE/Fingntell-AI/tree/main`

Full-stack architecture featuring Java 17 LTS, Spring Boot 3, React 19 (JavaScript), PostgreSQL, and Docker.

Production Technology Stack

Updated technology stack specification.

BACKEND ARCHITECTURE

Runtime: Java 17 LTS

Framework: Spring Boot 3.x

Security: Spring Security 6

Database ORM: Spring Data JPA

DB Migration: Flyway SQL Versioning

AI Engine: Spring AI Vision Parsing

FRONTEND & DATABASE

UI Framework: React 19

Language: JavaScript (JSX)

Build Tool: Vite

Styling: Tailwind CSS

Database: PostgreSQL 16 + pgvector

Deployment: Docker & Docker Compose

Core Capabilities

Solving financial tracking challenges with AI.

1. Smart Vision OCR

Upload receipts/PDFs. Spring AI extracts vendor, date, total amount, and line items into JSON DTOs.

2. Conversational RAG Assistant

Ask financial questions in plain English. Powered by PostgreSQL 1536-dimensional pgvector search.

3. Spending Dashboard

Interactive React 19 & Recharts analytics displaying monthly expenditure trends and budget status.

4. Enterprise Security

Stateless Spring Security 6 filter chain ensuring user data privacy and access controls.
